Abstract

The recent international things had a large impact on the aviation sector because of several reasons. This documentation is all about the user interface wireframe; here the home page of our flight fare prediction project is explained.

1. Web Interface

Our web page is one single interface where both input from the user and the prediction is displayed.

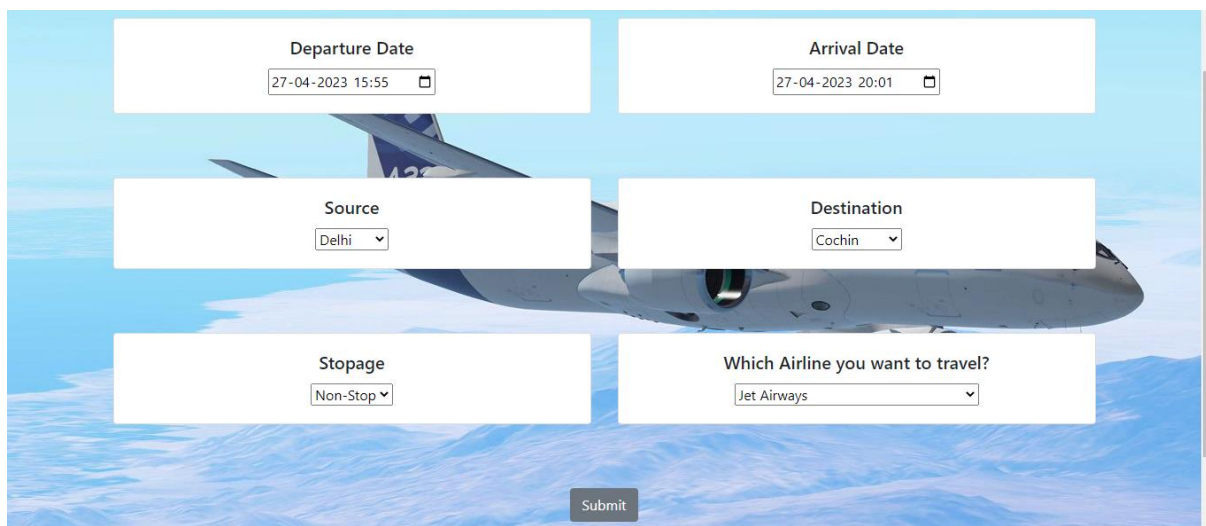

The wireframe shows a web interface titled "FLIGHT PRICE" in the top left corner. The background is a blue sky with a white airplane flying. The interface contains six input fields arranged in a 3x2 grid. The top row has "Departure Date" and "Arrival Date", both with placeholder text "dd-mm-yyyy --:--" and a calendar icon. The middle row has "Source" (with a dropdown menu showing "Delhi") and "Destination" (with a dropdown menu showing "Cochin"). The bottom row has "Stopage" (with a dropdown menu showing "Non-Stop") and "Which Airline you want to travel?" (with a dropdown menu showing "Jet Airways"). A "Submit" button is located at the bottom left of the form area.

2. User Input

Whenever the user hits our url , they first see the user input page here they have to provide the information like:

- Every user input has its own dropdown where the user can select their input.
- After providing the required input and pressing the submit button, the page refreshes and displays the output

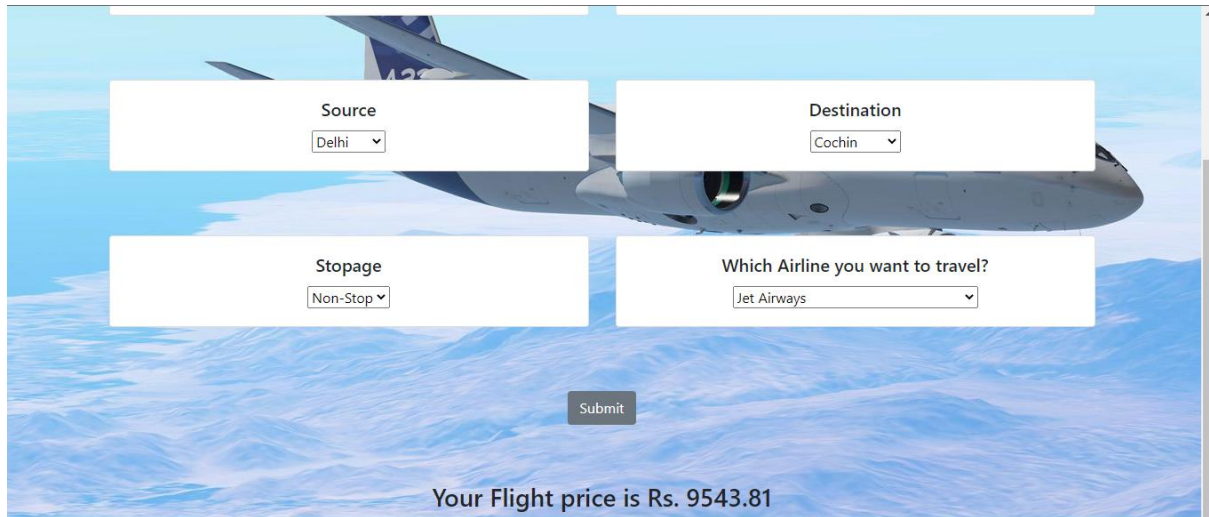

The screenshot shows the same web interface as the wireframe, but with user input. The "Departure Date" field now shows "27-04-2023 15:55" and the "Arrival Date" field shows "27-04-2023 20:01". The "Source" dropdown menu shows "Delhi" and the "Destination" dropdown menu shows "Cochin". The "Stopage" dropdown menu shows "Non-Stop" and the "Which Airline you want to travel?" dropdown menu shows "Jet Airways". The "Submit" button is still present at the bottom left.

3. Result Page

After the user hits the submit button the page gets refreshed and the results are being displayed in the highlighted area in the above frame.

The user can refill all the inputs in same page and get the results in the same way.

A wireframe of a flight booking result page. The background is a blue sky with white clouds and a white airplane flying. The page contains four white rectangular input boxes arranged in a 2x2 grid. The top-left box is labeled 'Source' and has a dropdown menu with 'Delhi' selected. The top-right box is labeled 'Destination' and has a dropdown menu with 'Cochin' selected. The bottom-left box is labeled 'Stopage' and has a dropdown menu with 'Non-Stop' selected. The bottom-right box is labeled 'Which Airline you want to travel?' and has a dropdown menu with 'Jet Airways' selected. Below these boxes is a dark grey 'Submit' button. At the bottom of the page, the text 'Your Flight price is Rs. 9543.81' is displayed.
